

Polycarbonate windows made by Tulderhof are beautiful and affordable solution to meet regulations concerning daylight in pig- and poultry housing.

The windows are always tailor-made and can be build in what we call a "light- street" In this case the contractor leaves a continuous opening in the wall of a certain height. We will fill this opening alternately with windows and air inlets. In the project-chapter you can see many examples of "light-streets"

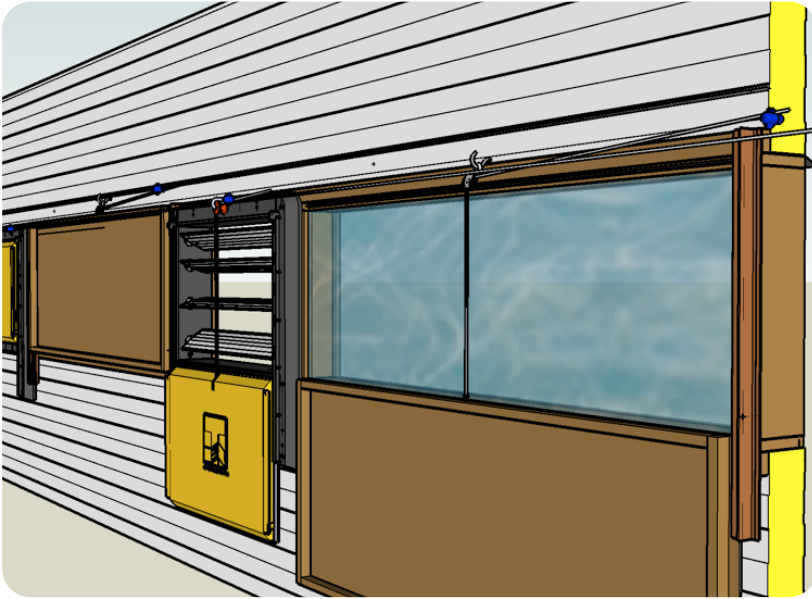

But of course we can supply separate windows as well. And, there are many variations possible in combination with an integrated air inlet. All sizes are possible! We strongly recommend equipping your daylight solution with a blackout system. We can integrate a blackout system in every type of window. This way you can adjust the amount of light which is important in e.g. cannibalism among hens

## Polycarbonate Windows

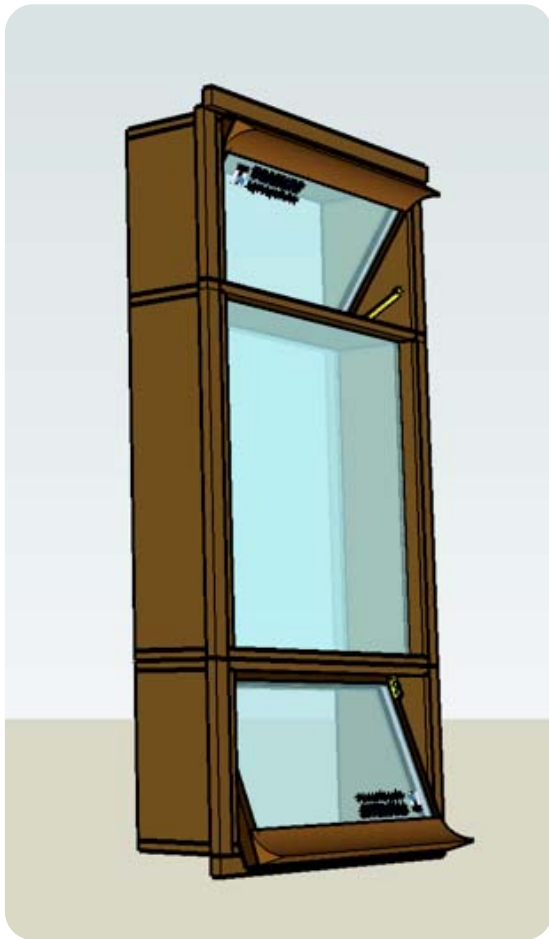

- ▶ Well insulated
- ▶ Opal or clear
- ▶ Custom made
- ▶ Blackout possible

## Technical information “light-street”

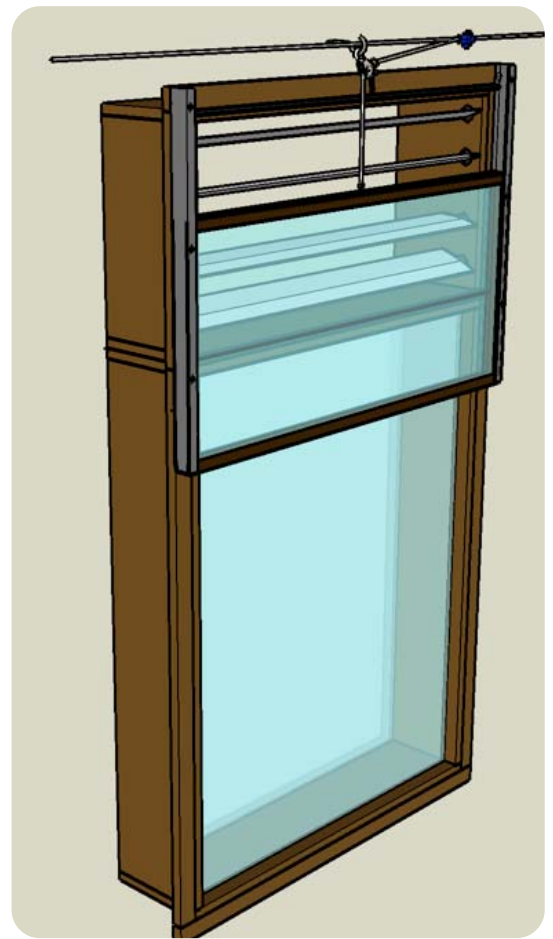

- ▶ The frame is made of the highest quality 18 mm plywood. In this frame 2 times a polycarbonate plate of 10 mm thick is glued.
- ▶ Standard heights are 300, 400, 500 and 600 mm. But every size is possible.
- ▶ All air inlets can be build in between these windows. Also the plastic Flash 3300.
- ▶ We can make windows for every wall type (concrete, sandwich panel or bricks).
- ▶ We can provide you with drip-moulding made of 1,5 mm steel sheet profiles.
- ▶ Windows are very easily mounted, as is the blackout system.

## Technical information single windows

- ▶ Windows are custom made for every hole in the wall.
- ▶ Every window is provided with a flange which ensures a nice finishing and easy mounting.
- ▶ 2 sheets of 10 mm polycarbonate and a thick layer of standing air ensure a very good insulation.
- ▶ Windows are easy to combine with all our types of air inlets.
- ▶ We can provide the polycarbonate in opal or clear finish.
- ▶ A blackout option is possible for the windows.
